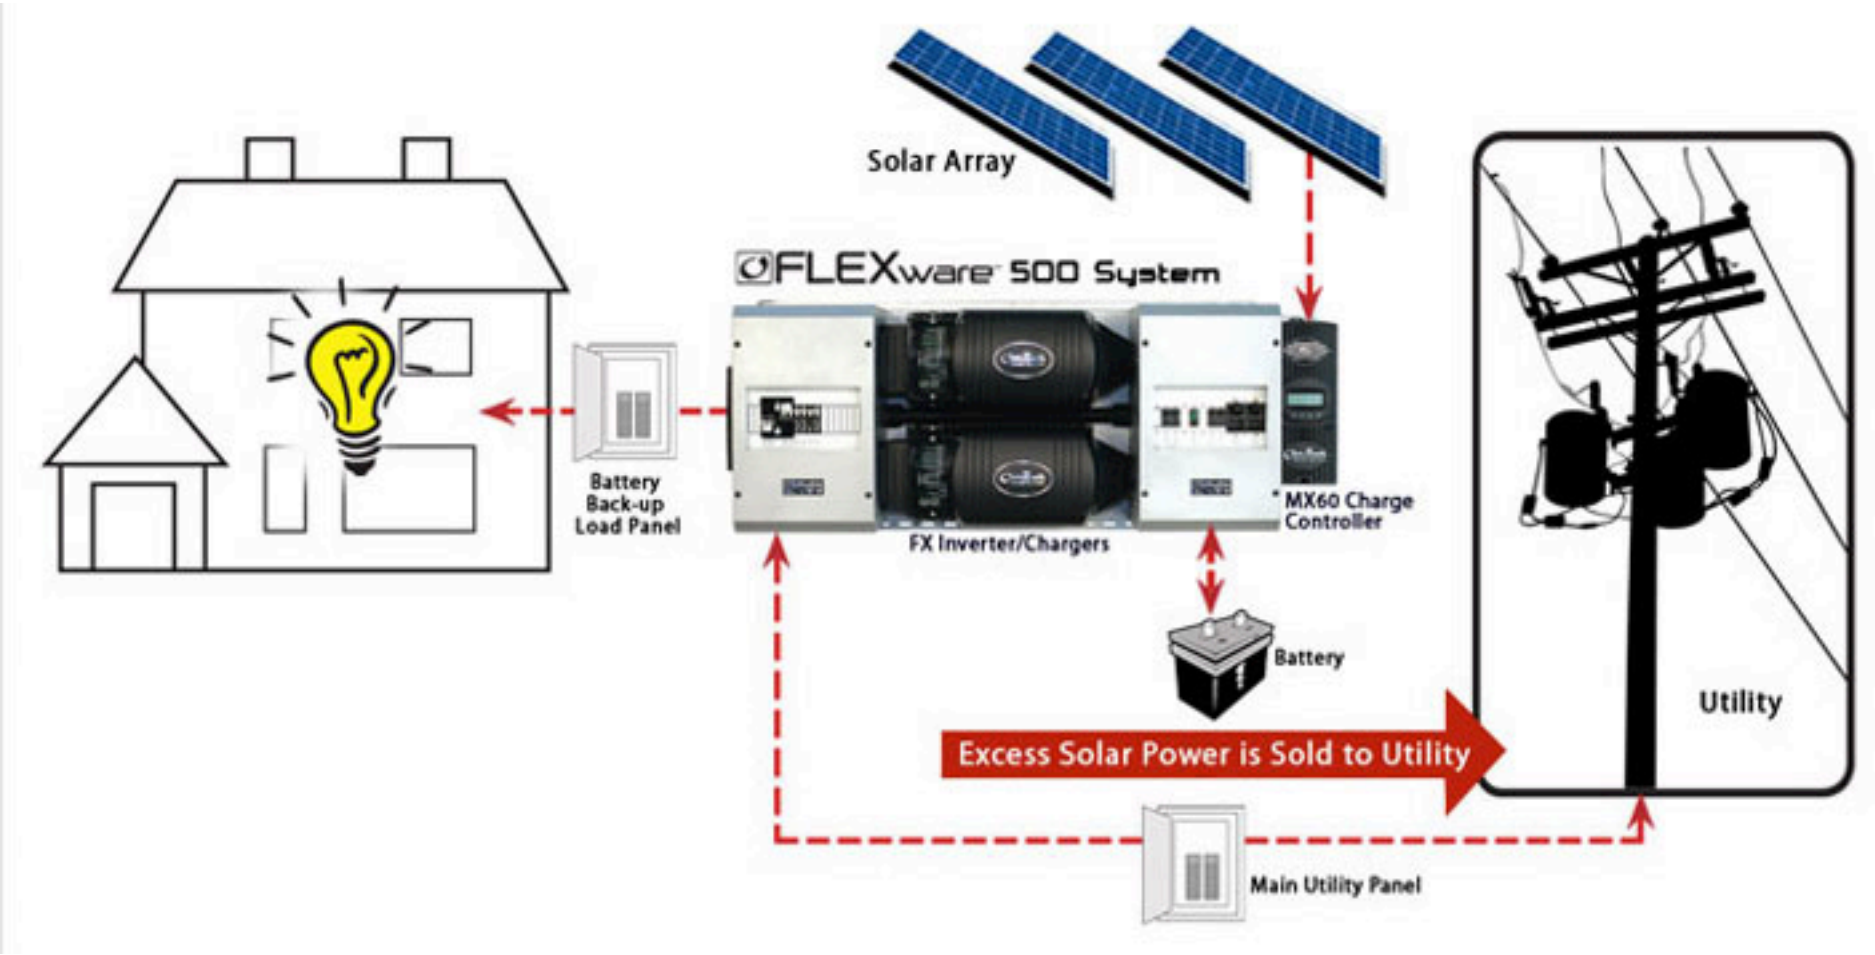
PV On Grid-Interactive

House With Grid Interactive **Outback** Inverters, Charge Controller and Batteries

It's not well known that if utility power is lost with a traditional utility grid-tie inverter, one cannot use the renewable energy source.


For people who want the ability to sell back renewable energy power to the utility through net metering and also want to be able to use their renewable energy source in the event of a utility power failure, OutBack offers the GTFX and GVFX lines of inverters for grid-interactive inverters.
